SUMMARY

Junior Penetration Tester currently developing hands-on experience in web application security, network enumeration, Linux and Windows privilege escalation, and vulnerability analysis. Currently enrolled in the Digital Egypt Pioneers Initiative (DEPI) Penetration Testing track. Strong software engineering foundation with practical knowledge of application architecture, authentication, APIs, databases, and secure code review. Experienced in using legal and controlled environments such as TryHackMe and PortSwigger Academy.

EDUCATION

- **Bachelor of Computer and System Engineering** 2023–2028
Capital University GPA: 3.8/4.00

SECURITY TRAINING

- **Penetration Testing Trainee** 2026
Digital Egypt Pioneers Initiative (DEPI) In Progress
 - Studying penetration testing methodology across reconnaissance, enumeration, vulnerability analysis, exploitation, and reporting.
 - Practicing web application security concepts including Cross-Site Scripting, SQL Injection, and Broken Access Control.
 - Developing practical skills in Linux, networking, service enumeration, and privilege escalation.
 - Working exclusively in legal, authorized, and controlled security laboratories.

SECURITY PRACTICE

- **TryHackMe Controlled Security Labs** 2025–2026
Hands-on penetration testing practice in isolated and authorized environments.
 - Completed the Blue room, focusing on service enumeration and understanding attack paths.
 - Completed Relevant, practicing web enumeration, file transfer attack paths, and post-exploitation fundamentals.
 - Completed Bounty Hacker, applying reconnaissance, service enumeration, and controlled exploitation methodology.
 - Completed Kenobi, practicing SMB enumeration, service discovery, and Linux privilege escalation.
 - Completed Steel Mountain, exploring Windows service exploitation and privilege escalation.
 - Completed Linux PrivEsc and Windows PrivEsc guided practice rooms.
- **Web Application Security Practice** 2026
Structured practice focused on identifying and analyzing common web vulnerabilities.
 - Practiced reconnaissance and endpoint discovery using Nmap, Gobuster, ffuf, and Amass.
 - Used Burp Suite and browser developer tools to inspect requests, parameters, sessions, and application behavior.
 - Studied Cross-Site Scripting, SQL Injection, Broken Access Control, authentication weaknesses, and insecure application behavior.
 - Documented findings using evidence, impact, affected components, and remediation recommendations.

PENETRATION TESTING METHODOLOGY

Reconnaissance: Authorized scope mapping, OSINT, technology fingerprinting, attack surface discovery

Enumeration: Service discovery, endpoint discovery, directory enumeration, role and behavior analysis

Web Security Testing: XSS, SQL Injection, Broken Access Control, authentication and session testing

System Security Testing: Linux enumeration, Windows enumeration, service weaknesses, privilege escalation

Reporting: Evidence collection, vulnerability impact, risk prioritization, and practical remediation

TECHNICAL SKILLS

Security Tools: Burp Suite, Nmap, Wireshark, Gobuster, ffuf, Amass, Kali Linux
Web Security: XSS, SQL Injection, Broken Access Control, Authentication Testing, Secure Code Review
Network and Systems: Network Enumeration, Service Discovery, SMB, Linux, Windows Server
Privilege Escalation: Linux Privilege Escalation, Windows Privilege Escalation, Misconfiguration Analysis
Scripting and Programming: Python, Bash, C++, JavaScript, TypeScript
Software Engineering Foundation: REST APIs, JWT, RBAC, Node.js, Express, React, MongoDB, Git/GitHub

EXPERIENCE AND LEADERSHIP

- **Mentor** 2025
CPC Community – Capital University
 - Guided more than 100 students in problem-solving techniques and algorithmic thinking using C++.
 - Developed strong communication, analytical thinking, and technical mentoring skills.

- **Competitive Programming Trainee** 2024
CPC Community – Capital University
 - Practiced time complexity, frequency arrays, binary search, and logic implementation.
 - Solved algorithmic problems through curated contests and structured training.
